

With extensive experience in international business development and technological innovation, I specialise in market expansion and commercialisation. In my current role as a Project Manager (Commercialisation) for the Natural Resources and Energy division at the Technology Innovation Agency (TIA), I support the commercialisation of technological innovations, aligning with our division's strategic objectives. My responsibilities include financial management, stakeholder engagement, portfolio management, and governance, ensuring the successful commercialisation of TIA-funded technologies and products.

Previously, I served as a Senior Market Advisor at Enterprise Ireland, where I helped drive export growth for Irish companies in Sub-Saharan Africa. My role involved leveraging a network of buyers and decision-makers, identifying market opportunities, and supporting client companies in market entry and expansion.

I also held the role of Southern Africa Trade Services Manager at the Department for International Trade (DIT) in Africa, where I managed major strategic events, facilitated market research, and built relationships with UK and Southern African businesses.

With a background in business development, project management, and commercialisation across various sectors, I am equipped to contribute to growth and innovation in diverse industries. My aim is to leverage my skills and network to create sustainable business opportunities and drive impactful results.
